

Qualiteasy[®] eBD V1.0

The power of simplicity, without restricting your growth!

- **Qualiteasy © eBD** is the solution for documentary management and communication in accordance to Excellence policies (ISO, Environmental Management, Occupational Health and Safety, etc.) for organizations requiring a high level of management efficiency.
- **Qualiteasy © eBD** allows you to serve hundreds or thousands of clients simultaneously—with every technological guarantee.
- This version of Qualiteasy is targeted towards government organizations, large corporations, departments of education, education associations, colleges, universities, religious organizations, consultants, and certification authorities.
- **Qualiteasy © eBD** is also designed to meet the needs of organizations that have various levels or units of management within their structure: departments, companies, work centers, headquarters, delegations, etc.
- The e-Business Designer software from which **Qualiteasy © eBD** was developed contains standard Web development technologies that meet the specifications defined by international organizations for standardization: http, HTML, CSS, XML, Web Service/SOAP, WAI or Web DAV. eBD can easily incorporate other applications, as well.
- eBD can be integrated with multiple databases without duplicating information. The software consults the data and presents the unified information through one unified Web interface that shows the data visually, in real time. Microsoft SQL Server, Informix, MySQL, JDBC, Oracle 8, 9i, 10g, Progress, Postgre SQL
- **Qualiteasy © eBD** works with the following operating systems: Microsoft Windows (9x, NT, XP, 2000, 2003) UNIX (Sun, IBM, Digital, HP, BSD, SGI, etc), Linux (suse, Red-Hat, Debian, Gentoo, etc) and Mac (OSX)
- eBD is compatible with Internet Explorer 5.5 (or higher), Mozilla/Firefox 1.0 or higher, Netscape 7.1 or higher, and can be installed on Apache HTTP Server 2.0.
- The software comes equipped with advanced security systems including an encrypted URL for each user session, SSL – Secure Socket Layers and PKI Private Key Infrastructure.
- **Qualiteasy © eBD** is multilingual, allowing the client to choose their language of preference through the control panel.

Software Characteristics

Qualiteasy © eBD is software with internet technology. It allows flexible management, independent of the organization's geographic dispersion.

Qualiteasy consists of two areas, one designed for users and another for the administrators. This structure facilitates the maintenance of information and all the tasks related to its updating process.

Qualiteasy is modular software that can grow with the needs of the customer.

MODULES

Unit Creation Module

- Create divisions for a unit, company, or organization...each with their own exclusive Qualiteasy © eBD address, so that the whole system works smoothly, regardless of the number of users, modules, etc.
- The user can choose between the following languages: English, German, Spanish, and Catalán. The application operates in the language specified by the individual user. Subsequently, the user can choose the language seen by the entire organization, as well.

MODULES THAT EACH ENTITY CONTAINS:

Documentary Management and Communication:

- Publish the principles, policies, and quality objectives of the Organization, link them with indicators and establish a documental pyramid (manual, process map, flow diagrams, formulas, registers, work instructions, ...)
- Electronic validation of documents
- Introduction and courses of Non-conformities and Corrective/Preventive Actions and Improvements
- Manage internal communication

Training Management:

- Create, approve, communicate and monitor the Annual Training Program for the organization's personnel
- Evaluate and record the effectiveness of the training programs by job position and training activity

Audit Management:

- Publish the annual Audit Plan and let personnel know how and when processes or departments will be audited
- Report audit results (audit reports) to your personnel
- Allow users to view non-conformities or corrective actions based on audit reports

Statistics:

- Quantitatively control the number of incidents, complaints, non-conformities, or corrective actions which occur in your organization
- Monitor, by means of a personal file, the involvement of a certain person in different activities related to the quality management system
- Allows creation of an indicators report associated with each process and their follow-up

Online Surveys:

- Allows the creation of online surveys to monitor customer satisfaction in real time
- Allows you to send the surveys by email, to your users of Qualiteasy as well as to external users such as clients.
- Allows anonymous surveys as well as tracking of respondents
- Allows statistics in real time to be displayed graphically

CONTRACT MODALITIES

QUALITEASY © eBD CORPORATE

Qualiteasy © eBD Corporate is the Licensed Version of Qualiteasy © eBD

With a one-time fee, the client has total control over the activation and deactivation of entities, can put limits on users, control traffic, and manage hard drive space. This software is installed to the server decided by the client and the services loaned by Qualiteasy Internet Solutions S.L. are the following:

Online training for Technical and Systems managers, technical and incident-based support, and updates for new software versions

QUALITEASY © eBD SAAS

Qualiteasy © eBD SaaS is the subscription version of Qualiteasy © eBD

The client pays a monthly fee depending on the number of Qualiteasy applications they wish to install. In order to provide control and independence over activation and deactivation of entities, as well as be able to limit users, control traffic, and hard drive space, it's necessary to enlist a minimum of 50 entities.

In the SaaS modality, the software resides in the servers contracted by Qualiteasy Internet Solutions S.L. and following services are included.

Hosting of the application, daily security copies, online training for systems managers, technical and incident-based support, and updates for new software versions

Frontoffice: User area

Backoffice: Administration area
